

PROFILE

RecFaces company

We provide biometrics as a competitive advantage for your business

About RecFaces

RecFaces is a developer of ready-made biometric software based on facial recognition, adapted to meet specific tasks and needs of various industries

Our mission

«WE PROVIDE BIOMETRICS AS A
COMPETITIVE ADVANTAGE FOR
YOUR BUSINESS»

Key Facts about RecFaces

We are on the market since 2014

Recognition speed <1 second

Top-class development team

More than 200 installations worldwide

With over 15 years of experience in biometrics

9 ready-made box solutions

The accuracy is confirmed as the solution maintains top ranking in NIST

Solution installation takes 20 minutes

RecFaces Benefits

A WIDE RANGE OF READY-MADE BIOMETRIC PRODUCTS

- Each of our products is tailored to improve security, marketing campaigns, personalized communication with customers, staff control, automation and acceleration of company processes. A single ecosystem can be created based on boxed solutions

GUARANTEED RESULT

- RecFaces is focused on solving specific business tasks to guarantee results for customers in a short time, providing businesses with the competitive advantages of implementing biometrics

TECHNOLOGICAL AND RELIABLE SOLUTIONS

- The architecture of RecFaces solutions includes not only the application functionality but also a set of special performance characteristics that simplify administration and fine-tuning.
- This made it possible to become a technological partner of such famous world leaders in the automation and security

READY-MADE CERTIFIED INTEGRATIONS

- RecFaces solutions enrich and upgrade existing systems with new biometric features, allowing users to work in a familiar interface

RecFaces Benefits

TRANSPARENCY AND ACCESSIBILITY OF SOLUTIONS

- A demo of the system allows you to quickly test the effectiveness of solutions at the customer site and move on to the implementation and scaling of your project.
- We provide free training courses, send educational materials, and share experiences to show the benefits of biometric technology for business

UPDATE POLICY

- As part of regular updates of our solutions, the user gets new functions and improved biometric algorithms

HIGH-QUALITY SUPPORT

- During the product lifecycle, we provide a set of engineering and consulting services that support reliable and continuous operation, as well as get feedback to create new functions of our solutions. Successful projects with partners in various regions of the World is our priority

DATA PROTECTION

- We implement Privacy Protection mechanisms to avoid out-of-scope applications. Our solutions incorporate mechanisms for protecting and encrypting personal data

Our Partner Values

All parties benefit from such partnership

For VMS\ACS
manufacturers

- Providing new biometric opportunities as part of our solutions
- Increasing the technological efficiency of the offered complex solutions
- Increasing the competitiveness of solutions

For integrators

- Increase revenue and technological image of the company
- Expand the pool of projects in already attracted clients
- Assist in attracting new clients

For end customers

- Boosting security
- Speeding up response times and investigations
- Optimize the work of security departments
- Minimize additional implementation costs

Technology partners

Certified integrations enable easy biometrics implementation and modernization of existing systems, allowing you to work in a familiar user interface

Technological interaction with the leaders of the world market presupposes high efficiency in the use of new biometric capabilities without spending resources on development

Placement on global marketplaces increases the competitiveness of joint solutions, making them accessible and convenient for existing and potential customers

We provide solutions for different industries worldwide

«Successful projects with partners in various regions of the World is our priority»

Improving the workplace safety, mask control

Government Facility

Increasing the level of security, timely response to security incidents

State body

Entrance control of visitors to the sports events

Gosford Stadium

Increasing the safety level of passengers

Jomo Kenyatta Airport

Improving the safety level of visitors to the shopping center, mask control

Jockey Club shopping center

Confirming the identity of clients, increasing the level of security when performing transactions

One of the leading commercial banks

What is a box solution with facial recognition functions?

01

It takes 20 MINUTES to install the solution

02

The identification process using biometrics takes less than 1 SECOND

03

Zoning and setting up policies for EACH camera

04

EASY setup of notification tools, messengers, signals on the screen

05

A CONVENIENT mobile application for security service employees who are not at the post

06

WELL-ESTABLISHED update policy and technical support

RecFaces products

Id-Guard

A software product for biometric facial identification in a video stream aimed at improving the security on the site

Id-Gate

Is a software product for enriching Access Control Management Systems with biometric capabilities

Id-Check

Is a software product for verifying or confirming the identity in various processes

Id-Target

A software product that provides a new level of targeted customer interaction through biometric identification

Id-Welcome

A software product that provides a personalized welcome message display on interactive boards and monitors

Id-Logon

Is a software product for biometric authentication of users in operating and information systems

Id-Line

A software product that expands the capabilities of an electronic queue terminal through biometric identification

Id-Time

Is a software product for recording employees' working hours using biometric identification

RECFACES\ BIOMETRICS IN TRANSPORT FACILITIES

Airport (Kenya)

Id-Guard -

A software solution for biometric facial identification, specially developed for the Pelco VideoXpert VMS

Project:

1. We had to increase security at the airport by identifying individuals in the video stream and instantly notifying the airport security services of incidents.
2. We needed to solve facial recognition systems' issues, such as lack of professionals with deep understanding of biometric projects, problems with long integration, video files and multiple IP camera streams.
3. We provided a high level of technical support at all stages of the project.
4. The total duration of the project, including the purchase of equipment, took only 3 months. It also took 4 business days to install, debug, and launch the software.

RECFACES \ IMPLEMENTATION OF BIOMETRICS AT TRANSPORT FACILITIES

Metro Station (Thailand)

Id-Guard -

a ready-made biometric software solution for face recognition in the video stream designed as a specialized plug-in deeply integrated with the VMS VideoXpert Pelco

Project:

1. Identification of metro visitors in the video stream and prompt informing of the security service about the detection of a person from the "stop list".
2. Search for a person: a photo of the wanted person is uploaded to the Id-Guard, after which the operator receives a notification about his appearance at the station.
3. Prompt search of people in the archive with the indication of the place and time of identification for an effective investigation of the incidents that occurred.
4. Collecting gender statistics and sending notifications to the security operator about the presence/absence of a mask on a person's face.
5. Analysis of the station load by counting the number of metro visitors in a given period of time.
6. Deep integration with the VideoXpert archive, which allows you to quickly find a person in the archive of recordings and immediately start playing videos from the archive.

RECFACES \ IMPLEMENTATION OF BIOMETRICS IN THE BUSINESS SECTOR

Schneider Electric Office (Costa Rica)

Id-Guard -

the facial recognition module Id-Guard is dedicated to expand the functionality of Pelco's VideoXpert video surveillance system

Project:

1. Identification of the office staff in the video stream and promptly notifying the security service if an employee/guest from the “stop list” is detected.
2. Id-Guard helps the office security service to monitor unregistered persons and promptly send notifications to the operator in the VideoXpert interface, in the mobile app, as well as by email, sms, http.
3. In order to comply with the mask control regime, Id-Guard allows to monitor the wearing of medical masks by employees and guests and to generate reports on violators of the mask control regime.
4. Profound integration with the VideoXpert surveillance system archive, allows to find the person you are looking for quickly in the data archive and play back video from the archive. The biometric archive incident investigation takes less than 10 seconds.

RECFACES\ BIOMETRICS IN A SHOPPING CENTER

Jockey Club shopping center (Brazil)

Id-Guard -

The Id-Guard recognition module is designed to extend the functional capabilities of the Pelco VideoXpert VMS

Project:

1. Id-Guard ensures face identification in the video stream. Being fully integrated into the VMS solution used by the client, VideoXpert enabled to launch functions for searching faces (including retrospective search) and the biometric templates storage in the unified interface of the video analysis system.
2. The facial recognition system provides the end-user with security and information about incidents in the shopping center on time.

RECFACES \ BIOMETRICS ON INDUSTRIAL FACILITIES

PRONICO, nickel-producing
company (Guatemala)

Id-Gate -

software product for enriching the access control systems with biometric capabilities

Project:

1. Implementation of biometric access control for factory staff using biometric facial recognition terminals at the checkpoint.
2. Automated and convenient control of wearing masks by employees, temperature measurement at the checkpoint.
3. IP cameras placed in the secure facility provide an additional possibility to control access to the site. The Id-Gate system identifies and compares an employee's access level with the required access level in the ACS. If the system detects an employee with insufficient access or an unauthorized person in the protected area, instant notifications are sent to the security operators.
4. Implementation of contactless access to the facility, allows workers to conveniently enter the factory, without creating a queue, as it was previously the case with fingerprint biometrics

RECFACES \ BIOMETRICS IN THE STATE FACILITIES

Administrative Control Authority (Egypt)

Id-Guard -

a software product for biometric facial identification in a video stream,
specially developed for the Pelco VideoXpert VMS

Project:

1. Formation and update of visitors' biometric profiles.
2. Ensuring security at the facility by identifying office visitors and promptly informing the security service about the presence of an unauthorized person at the facility.

RECFACES \ BIOMETRICS IN THE STATE FACILITIES

Government Facility (Saudi Arabia)

Id-Guard -

a ready-made biometric software solution for face recognition in the video stream designed as a specialized plug-in deeply integrated with the VMS VideoXpert Pelco

Project:

1. Ensuring security at the facility, by identifying visitors and promptly informing the security service about the presence of an unauthorized person at the secure facility.
2. Each system operator can receive only those notifications that fall within its area of responsibility. The solution allows you to generate notifications by cameras, locations, recognized faces, lists, and many other parameters. Notifications are displayed in the VideoXpert interface, in the mobile application and are sent via the following channels: email, sms, http.
3. The command is issued through the software module of face recognition to trigger the camera relay, which opens the boom barrier by facial identification.
4. To comply with the mask-wearing policy, the solution allows you to configure automatic notifications by masks.
5. A report on detected violations is provided regarding particular people to organize the information

RECFACES \ INTRODUCTION OF BIOMETRICS IN DATA CENTERS

Data Center (Egypt)

Id-Guard -

a biometric software product for identification by the face image in the video stream as a specialized plugin integrated with the Pelco VideoXpert VMS

Project:

1. Creation of a digital biometric profile of employees and visitors to the data center.
2. Automatic identification of employees and visitors to the data center, notification to the security service of persons from the lists, as well as the presence of an unauthorized person at the site.
3. Compliance with mask regime by configuring automatic mask notifications policy.
4. Prompt search of people in the archive, indicating the place and time of identification for effective investigation of incidents that occurred.
5. A report on identified violations is provided with reference to specific people to systematize information.

RECFACES \ BIOMETRICS AT SPORTS FACILITIES

Stadium (Australia)

Id-Guard -

Id-Guard has been designed to provide more extensive functionalities for the VideoXpert video surveillance system

Project:

1. The digital biometric user profile creation.
2. Identification of stadium visitors in the video stream and prompt notification of the security service about the detection of a fan who has previously committed illegal actions to prevent a possible incident.
3. Id-Guard deals with tracing a person at the stadium. A photo of a person is uploaded to Id-Guard, after which the operator receives a notification about the current location of the person.
4. Deep integration with the VideoXpert archive allows you to quickly find a person in the records and play videos from it.
